

Reclaimed & Sustainable Wood

RECLAIMED & SUSTAINABLE WOOD

Timeless beauty achieved through smart forestry and recycling

While many consumers are quickly adopting alternatives to hardwood floors, some designs still call for the distinct character of specific North-American wood species. These materials are sourced either from demolition projects or brokers who buy up scrap from old buildings and re-sell it, or from FSC-certified lumber mills.

features & benefits

Sensible alternative to using new wood
May often be sourced within 500 miles of
job site

Best option for matching up to existing,
older wood flooring applications

Installed like any other wood floor

May be finished with non-toxic oils for low
emitting finished product
